SUMMARY

- Data & Business Analyst with 3+ years turning multi-source data into decisions across research, education, and business settings; M.S. in Data Science, UT Arlington (Dec 2025).
- Sole analyst on a university critical-mineral supply-chain study, harmonizing USGS, Bloomberg Terminal, and corporate-filing data in Python to map global gallium flows and quantify China's ~88% supply concentration, toward a peer-reviewed publication.
- Strong in SQL, Python, Power BI, and Tableau, building ETL pipelines, dashboards, and KPI reporting that give stakeholders self-serve answers.
- Shipped an AI-powered market-intelligence platform integrating structured and unstructured data with GPT, cutting manual reporting effort 60%.
- Comfortable across the full analytics lifecycle: data collection, cleaning, modeling, visualization, and stakeholder communication.

EXPERIENCE

University of Texas at Arlington

Arlington, TX

Data Analyst

Jan 2024 – Present

- Sole data analyst on a critical-mineral supply-chain research project, building an end-to-end pipeline that maps global gallium production-to-consumption flows toward a peer-reviewed publication (MDPI / *Resources Policy*).
- Sourced and reconciled data from USGS mineral summaries, Bloomberg Terminal, and corporate 10-K / JORC filings, standardizing country production, company tonnage, and consumer geographies into analysis-ready tables.
- Built a Python / pandas harmonization engine applying frequency-weight allocation rules to split company production by country, scale to USGS country totals, and de-duplicate joint-venture assets.
- Developed Power BI and Plotly visualizations (producer→consumer flow maps, company→country Sankey diagrams, and concentration charts) that quantified China's ~88% control of global gallium supply and its 2023–24 export-restriction impact.
- Documented data sources and frequency-weight attribution rules in the manuscript's methods and results sections for full reproducibility.

Sri Udaya Institutions

Hyderabad, India

Business Analyst

Jun 2022 – Jul 2023

- Scaled a basic single-campus Power BI setup into a centralized cross-institute reporting layer spanning 6 campuses and ~4,800 students, unifying admissions, attendance, and academic-performance data into one view leadership previously lacked.
- Automated cross-campus data consolidation, validation, and reporting in SQL and Excel, cutting multi-campus report prep from a week of manual collation to same-day refreshes and standardizing KPIs across all 6 institutions.
- Delivered cross-institute enrollment and performance insights that shaped admissions strategy, supporting onboarding of 80–200 additional students per campus the following academic year.
- Defined standardized KPIs (attendance rate, academic performance, enrollment) across all campuses, enabling apples-to-apples benchmarking that per-campus dashboards could not.
- Presented monthly performance reviews to campus heads and management, translating raw multi-campus data into clear, action-ready recommendations.

Aliens Space Station

Hyderabad, India

Business Associate

Mar 2022 – Jun 2022

- Managed a 2,000+ client pipeline in Salesforce CRM, consolidating leads from multiple sources and segmenting prospects to prioritize high-intent buyers.
- Built data-driven investment presentations using location heatmaps (prime zones, IT-hub proximity, growth corridors) that helped close 3 deals totaling ~\$600K in sales revenue.
- Analyzed lead-source performance across the pipeline to identify the highest-converting channels, sharpening prospect qualification and focusing outreach on high-yield sources.

PROJECTS

Retail Sales & Business Performance Analysis | *SQL, Power BI*

- Analyzed regional and product-level sales KPIs in SQL and shipped executive Power BI dashboards with customer segmentation, surfacing underperforming segments and revenue opportunities that supported data-driven decisions.

AI-Powered Market Intelligence Platform | *Python, SQL, Power BI, GPT*

- Built an end-to-end data pipeline integrating structured and unstructured sources and layered GPT-driven narrative insights on top of Power BI dashboards, automating analysis that cut manual reporting effort 60%.

Predicting Customer Purchasing Behavior | *Python, Machine Learning*

- Modeled large-scale e-commerce transaction data in Python to predict purchasing behavior and uncover product associations via market-basket analysis, enabling targeted cross-sell and recommendation strategies.

SQL Data Warehouse | *SQL Server, ETL/ELT*

- Centralized CRM and ERP data into a SQL Server data warehouse using ETL/ELT pipelines and star-schema dimensional modeling, delivering clean, analytics-ready datasets for fast self-serve business reporting.

Probabilistic Object Detection | *PyTorch, PDQ Metrics*

- Designed a probabilistic object-detection framework quantifying spatial and classification uncertainty with PDQ metrics, applying ensemble methods and Monte Carlo dropout to improve prediction reliability for robotic-vision systems.

SKILLS

Data Analysis: SQL, Python, R, Exploratory Data Analysis (EDA), Statistical Analysis, Hypothesis / A/B Testing, Data Cleaning & Wrangling, Data Mining

BI & Visualization: Power BI, Tableau, Excel (Advanced), Google Sheets, DAX, Plotly, Dashboard Design, Automated Reporting

Databases & Warehousing: SQL Server, PostgreSQL, MySQL, ETL/ELT Pipelines, Data Warehousing, Dimensional (Star-Schema) Modeling

Business Analysis: Requirements Gathering, KPI Development, Stakeholder Reporting, Data Storytelling, Customer Segmentation, Market Analysis

Python Data Stack: Pandas, NumPy, SciPy, Statsmodels, Scikit-learn

Machine Learning & AI: Predictive Modeling, Time-Series Forecasting, NLP, Ensemble Methods, GPT / LLM APIs, RAG, Prompt Engineering

Tools & Platforms: Salesforce CRM, Bloomberg Terminal, Azure, Git / GitHub, Jupyter

EDUCATION

University of Texas at Arlington <i>M.S., Data Science</i>	Arlington, TX <i>Dec 2025</i>
--	----------------------------------

GRIET <i>B.Tech., Mechanical Engineering</i>	Hyderabad, India <i>Jul 2022</i>
--	-------------------------------------

CERTIFICATIONS

- Microsoft Certified: Azure Data Engineer Associate
- Cisco: Data Analytics Essentials
- NPTEL: Python for Data Science
